Professional Summary

Software Developer and AI Engineer specializing in Python backend architecture and generative AI integrations. Currently developing custom AI agents and scalable data pipelines at Accenture to optimize nationwide supply chain ecosystems. Proven track record of building end-to-end applications—from production-ready RAG chatbots (LangChain, Gemini) to secure REST APIs (FastAPI). Adept at transforming complex business logic and raw datasets into automated, highly efficient solutions.

Technical Skills

Programming Languages: Python, Swift, JavaScript	Tools & Platforms:
Concepts: AI Development, RAG, Big Data, Microservices, Deep Learning, Statistics, Prompt Engineering, REST APIs, CI/CD, Automation, SDLC, OOP, Data Structures	AI / Data: LangChain, PyTorch, TensorFlow, Scikit-learn, Pandas, Spark, Hadoop, FAISS Backend / DB: FastAPI, Node.js, MongoDB, SQL, SQLAlchemy, Firebase, Firestore, Pydantic DevOps & Cloud: AWS (SageMaker), Docker, pytest, Git, GitHub, Selenium

Professional Experience

Software Engineer Accenture - Hybrid	Jan 2026 - Present
- Contributed to a national supply chain system migration to o9 Solutions for M. Dias Branco, replacing legacy architecture. - Built Python AI agents and optimized IBPL queries to process nationwide datasets, improving forecast accuracy. - Collaborated on scalable ETL data engineering pipelines integrating directly with SAP IBP to support country-wide operational and demand planning. - Gathered technical requirements and authored functional specifications in an Agile environment to align system architecture.	
AI Engineer (Contract) Revelo - Remote	Sep 2025 - Present
- Applied prompt engineering to identify and document failure modes in generative AI models for code generation. - Acted as HITL reviewer to iteratively guide an LLM in solving complex coding problems, evaluating 100+ code snippets to production standards. - Developed 50+ comprehensive unit tests using `pytest` to validate code quality of AI-generated solutions. - Leveraged AWS SageMaker and Docker to manage and replicate complex development environments from specific GitHub commits for accurate testing. - Successfully completed 200+ approved tasks across multiple projects, including conducting 50+ peer reviews and providing actionable HITL feedback that resolved model failure modes.	
Account Management Specialist Solenis - Remote - US HQ	Sep 2024 - May 2025
- Proactively analyzed customer data across 40+ B2B accounts using advanced Excel to identify growth opportunities. - Developed custom Python scripts to automate order processing and KPI tracking, significantly reducing manual data entry. - Coordinated cross-functionally with technical teams to resolve complex issues and ensure data-driven service delivery.	

Personal Projects

Knowledge Base RAG Chatbot [\[GitHub\]](#)

- Python
- LangChain
- Gemini Pro
- FAISS
- Hugging Face

- Developed a local RAG chatbot using LangChain and Gemini Pro to query custom markdown knowledge bases.
- Built a data ingestion pipeline to load, segment, and vectorize documents into a FAISS vector store.
- Designed a multi-step query chain for LLM orchestration using LangChain Expression Language (LCEL) to retrieve documents, rerank them by relevance, and synthesize a final response.
- Implemented a reranking step using a Hugging Face Cross-Encoder (TinyBERT) to improve contextual accuracy.

AI News Summarizer & Subscription Service [\[GitHub\]](#)

- Python
- BeautifulSoup
- Gemini AI
- Firebase
- GitHub Actions

- Deployed a production serverless application to scrape and summarize the top 5 daily articles from the BBC news website, delivering automated morning emails to 50+ active subscribers.
- Designed an automated Python pipeline using Requests and BeautifulSoup to structure news articles into JSON.
- Integrated Google Gemini AI to perform abstractive summarization with prompt-based control and text validation.
- Established a CI/CD workflow with GitHub Actions to automate daily data collection, AI inference, and distribution.
- Built a scalable subscription system using Firebase Hosting and Firestore (NoSQL) for user data persistence.

Secure Authentication API [\[GitHub\]](#)

- FastAPI
- SQLAlchemy
- JWT
- Pydantic
- SQLite

- Designed a RESTful API module to manage user authentication and secure access to protected application endpoints.
- Implemented a token-based security system using JWT for stateless authentication and bcrypt for secure hashing.
- Built endpoints for user registration, login, and profile management using FastAPI and Pydantic for data validation.
- Designed a persistent storage layer with SQLAlchemy ORM to connect the application to an SQLite database.

Education and Certifications

Postgraduate Specialization Tracks

2025 - 2027 (Expected)

Educaminas - São Paulo, Brazil

- Data Science & ML:** Big Data (Hadoop, Spark), NoSQL, Deep Learning, Predictive Analytics.
- Software Architecture:** Microservices, SOA, Cloud Computing, DevOps, Node.js, Scrum.
- Applied Statistics:** Forecasting, ANOVA, Experimental Design, Financial Math.

Bachelor in Systems Analysis and Development

2021 - 2024

UNIP - São Paulo, Brazil

AI Professional Training

Hashtag

Project-based training focusing on practical AI applications in Python utilizing Pandas, Scikit-learn, Keras, and TensorFlow.

Languages

- English:** C2 Level (Fluent)
- Portuguese:** Native
