Professional Summary

Software Developer and AI Engineer specializing in Python backend architecture and generative AI integrations. Experienced in building custom AI agents and scalable data engineering pipelines to optimize nationwide supply chain ecosystems. Proven track record of shipping end-to-end applications—from production-ready RAG chatbots (LangChain, Gemini) to secure REST APIs (FastAPI). Skilled at translating complex business logic and raw data into highly efficient, automated solutions.

Technical Skills

Programming Languages:

Python, Swift, JavaScript

Concepts:

AI Development, RAG, Big Data, Microservices, Deep Learning, Statistics, Prompt Engineering, REST APIs, CI/CD, Automation, SDLC, OOP, Data Structures

Tools & Platforms:

AI / Data: LangChain, PyTorch, TensorFlow, Scikit-learn, Pandas, Spark, Hadoop, FAISS

Backend / DB: FastAPI, Node.js, MongoDB, SQL, SQLAlchemy, Firebase, Firestore (NoSQL), Pydantic

DevOps / Cloud: AWS (SageMaker), Docker, pytest, Git, GitHub, Selenium

Professional Experience

Software Engineer

Jan 2026 - May 2026

Accenture - Hybrid

- Contributed to the migration of a legacy national supply chain architecture into a modern, scalable ecosystem for a major enterprise client.
- Developed custom AI agents and complex data extraction queries to process nationwide datasets, improving forecast accuracy.
- Collaborated on scalable ETL data engineering pipelines integrating directly with SAP IBP to support country-wide operational planning.
- Gathered technical requirements and authored functional specifications in an Agile environment to align system architecture.

AI Engineer (Freelancer Contract)

Oct 2025 - Present

Revelo - Remote

- Applied advanced prompt engineering to identify and document failure modes in generative AI models for code generation tasks.
- Acted as a human-in-the-loop (HITL) reviewer, evaluating **100+ code snippets** to ensure production-level quality and directly resolving critical model failure modes.
- Developed **50+ comprehensive unit tests** using `pytest` to validate code quality of AI-generated solutions.
- Leveraged AWS SageMaker and Docker to manage and replicate complex development environments from GitHub commits for accurate testing.
- Successfully delivered **200+ approved tasks** across multiple projects, including **50+ peer reviews**, consistently providing feedback that fine-tuned and improved model performance.

Account Management Specialist

Sep 2024 - May 2025

Solenis - Remote - US HQ

- Proactively analyzed customer data across **40+ B2B accounts** using advanced Excel to identify growth opportunities.
- Developed custom Python scripts to automate order processing and KPI tracking, reducing manual data entry.

Personal Projects

Knowledge Base RAG Chatbot [\[GitHub\]](#)

PythonLangChainGemini ProFAISSHugging Face

- Architected a local RAG chatbot using LangChain and Gemini Pro to query custom markdown knowledge bases.
- Built a data ingestion pipeline to load, segment, and vectorize documents into a FAISS vector store.
- Designed an LLM orchestration pipeline with LangChain Expression Language (LCEL) to retrieve documents and synthesize responses.
- Implemented a reranking step using a Hugging Face Cross-Encoder (TinyBERT) to improve contextual accuracy.

AI News Summarizer & Subscription Service [\[GitHub\]](#)

PythonBeautifulSoupGemini AIFirebaseGitHub Actions

- Deployed a production serverless application to scrape and summarize the top 5 daily articles from the BBC news website, delivering automated morning emails to **50+ active subscribers**.
- Designed a Python pipeline using Requests and BeautifulSoup to extract and structure news articles into JSON datasets.
- Integrated Google Gemini AI for abstractive summarization with prompt-based control and text validation.
- Established a CI/CD workflow with GitHub Actions to automate data collection, AI inference, and email distribution.

Secure Authentication API with FastAPI [\[GitHub\]](#)

FastAPISQLAlchemyJWTPydanticSQLite

- Developed a RESTful API module to manage user authentication and secure access to protected endpoints.
- Implemented a token-based security system using JWT for stateless authentication and bcrypt for password hashing.
- Built endpoints for user registration and login using FastAPI with Pydantic for robust data validation.
- Designed a persistent storage layer with SQLAlchemy ORM connecting to a local SQLite database.

Education and Certifications

Postgraduate Specialization Tracks2025 - 2027 (Expected)
Educaminas - São Paulo, Brazil

- Data Science & Machine Learning:** Big Data (Hadoop, Spark), NoSQL, Deep Learning, Predictive Analytics.
- Software Architecture:** Microservices, SOA, Cloud Computing, DevOps, Node.js, Scrum.
- Applied Statistics:** Demand Forecasting, ANOVA, Experimental Design, Financial Mathematics.

Systems Analysis and Development2021 - 2024
UNIP - São Paulo, Brazil

AI Professional Training
Hashtag Treinamentos
Project-based training focusing on practical AI applications in Python (Pandas, Scikit-learn, Keras, and TensorFlow).

Languages

- English:** C2 Level (Fluent)
- Portuguese:** Native
