

Olmir Stocker Neto

SYSTEMS SOFTWARE ENGINEER · OFFLINE-FIRST ARCHITECTURES

📍 São Paulo, SP, Brazil 📞 +55 11 94518-6180 ✉ owmyrstocker@gmail.com 🔗 linkedin.com/in/olmir-stocker-neto
🐙 github.com/owmyr 🌐 owmyr.github.io

PROFESSIONAL SUMMARY

Fullstack Software Engineer specializing in modern frontend applications, resilient offline-first browser architectures, and scalable asynchronous backend services (React, TypeScript, Python). Proven track record of shipping production software—including an institutional pedagogical platform deployed for **Colégio Santa Marcelina**, an automated content SaaS serving daily subscribers ([thedailybot.web.app](#)), and fault-tolerant data pipelines backed by comprehensive test suites (220+ tests). Passionate about web performance, clean state synchronization, and zero-loss offline storage.

TECHNICAL SKILLS

Programming Languages:

TypeScript, JavaScript (ESNext), Python, SQL, HTML5/CSS3

Frontend Engineering:

React 19, Next.js 15 (App Router), React Router 7, Tailwind CSS, Vite, TanStack Query, Zustand, Service Workers, IndexedDB, Responsive Design

Backend & Architecture:

Node.js, Python 3.12 (Async/Await), FastAPI, PostgreSQL, Supabase (Realtime, RLS), SQLite (WAL Mode), Firebase, REST APIs

Testing & Tooling:

Vitest, pytest, Playwright, Docker, GitHub Actions (CI/CD), Git, Agile/Scrum, Zod, SheetJS

PROFESSIONAL EXPERIENCE

Software Engineer / AI Code Reviewer

Oct 2025 – Present

Revelo · Freelance / Project-Based · Remote

- Engineered **50+ comprehensive unit and integration tests** using `pytest` to validate software stability and execution correctness across distributed Python modules.
- Configured and managed containerized, reproducible runtime environments matching production GitHub commits using Docker and AWS SageMaker.
- Conducted in-depth code reviews for **100+ complex codebases**, identifying concurrency bottlenecks, type errors, and architectural edge cases.
- Completed **200+ engineering tasks** with high peer review ratings, ensuring compliance with strict software quality benchmarks.

AI Agent Evaluation Engineer

May 2026 – Sep 2026

Turing · Contract · Remote

- Validated algorithmic correctness and asymptotic runtime across complex algorithms, benchmarking time/memory complexity ($O(N \log N)$ vs. $O(N^2)$) and enforcing clean code style guidelines.
- Engineered automated testing pipelines generating comprehensive **30+ input test suites** to stress-test algorithmic edge cases, numerical boundaries, and deterministic I/O.
- Containerized solution evaluation environments using **Docker sandboxes** for reproducible test execution, automated plagiarism auditing, and verification against competitive programming standards.

Software Engineer

Jan 2026 – May 2026

Accenture · Hybrid · Enterprise Client

- Contributed to the modernization of legacy supply chain architecture into a scalable, high-throughput distributed ecosystem for a major enterprise client.
- Engineered high-volume ETL data pipelines and optimized SQL extraction queries integrated with SAP IBP, processing nationwide datasets to drive operational planning.
- Built an internal AI Knowledge Assistant on **Microsoft Copilot** and **RAG architecture**, integrating custom domain models to train newcomers on enterprise query workflows and complex software configurations.
- Collaborated in an Agile Scrum environment to author technical specifications, map API contracts, and coordinate system delivery across cross-functional teams.

FEATURED SOFTWARE ENGINEERING PROJECTS

Colégio Santa Marcelina — Real-Time Collaborative Pedagogical Platform github.com/owmyr/SantaMarcelina

- Technologies:** React 19, Vite 8, Supabase Realtime, PostgreSQL (RLS), Tailwind CSS, BroadcastChannel, Offline-First Architecture, SheetJS, Oxlint
- Architected a collaborative Single Page Application for **Colégio Santa Marcelina**, replacing decentralized spreadsheets with an instant evaluation portal for faculty and coordinators.
 - Engineered an offline-first storage engine combining in-memory caching for instant UI updates, quota-safe local storage persistence, and cross-tab synchronization via BroadcastChannel.
 - Implemented a debounced synchronization queue (400ms) with batch upsert queries and compound keys, eliminating write race conditions and data loss.
 - Integrated Supabase Realtime WebSockets with PostgreSQL Row Level Security (RLS) to synchronize evaluation updates across admin dashboards instantaneously.
 - Optimized web performance via dynamic lazy loading for heavy spreadsheet generation modules (SheetJS), keeping the core production bundle under 56 kB with zero Oxlint warnings.

The Daily Bot — News AI Summarizer & Subscription Service github.com/owmyr/thedailybot · thedailybot.web.app

- Technologies:** Python 3.12, Async httpx, asyncio, Firebase/Firestore, Jinja2, GitHub Actions CI/CD, Circuit Breaker, pytest (275 Tests, 82% Coverage)
- Deployed a production automated news aggregation and subscription platform serving daily personalized digests to active email subscribers (thedailybot.web.app).
 - Built an asynchronous multi-source scraper in Python (httpx, asyncio) featuring semaphore concurrency limits, circuit breaker recovery, and Firestore persistence.
 - Implemented an intelligent subscriber preference engine to generate customized Jinja2 email templates and manage rate-limited SMTP delivery.
 - Authored a comprehensive test suite of **275 automated tests (82% coverage)** with pytest and pytest-asyncio, with scheduled daily runs orchestrated via GitHub Actions CI/CD.

TrendScout — E-Commerce Intelligence Platform & Data Pipeline github.com/owmyr/TrendScout · trendscout-shopee.vercel.app

- Technologies:** Python 3.11+, Next.js 15 (App Router), SQLite (WAL Mode), Playwright, Streamlit, Air-Gapped Pipeline, pytest (222 Tests)
- Engineered a fullstack market intelligence platform tracking sales velocity, pricing dispersion, and merchant lead pipelines.
 - Built a stealth data acquisition crawler using Playwright with persistent session states, typing jitter simulation, and adaptive request throttling.
 - Developed an operational supervision dashboard in Streamlit for real-time telemetry, execution ledger audits, and merchant CRM management.
 - Designed an air-gapped sanitization pipeline exporting internal analytics to a public Next.js 15 App Router web portal with zero database attack surface.
 - Maintained high code quality with **222 automated pytest tests** and strict static analysis.

EDUCATION & CERTIFICATIONS

Postgraduate Specializations · Educaminas [2025 – 2027 \(Expected\)](#)

- **Software Architecture:** Microservices, SOA, Distributed Systems, Cloud Architecture, DevOps
- **Data Science & Machine Learning:** Big Data (Hadoop, Spark), Deep Learning, Predictive Analytics
- **Applied Statistics:** Demand Forecasting, ANOVA, Experimental Design, Financial Mathematics

Bachelor in Systems Analysis and Development [2021 – 2024](#)
UNIP · São Paulo, Brazil

AI Professional Training · Hashtag Treinamentos
Practical, project-based programming covering scalable Python architectures, data modeling, and machine learning pipelines.

LANGUAGES

English: C2 Level (Fluent · Full Professional Proficiency) **Portuguese:** Native
